

MANAGED MOBILITY SERVICES

Brochure

Enabling Mobile IT

Mobile IT can transform your business.

However, it's a complex and time-consuming challenge to manage your mobile contracts, users, devices, costs, and security, effectively.

Utelize®

80%

Of total mobility IT costs occur after initial purchase

1 1/2 Hours

wasted on trying to fix device issues, per employee, per week

Only **20%**

of corporate users installed the latest and most secure Android OS version

Placing greater demands on your IT team and budgets, whilst creating new IT support challenges.

Utelize®

Sourcing and funding the right mobile devices

Identifying and managing mobile security risks

Supporting end users & mobile administration

Monitoring and managing mobile data consumption

Managing mobile device staging, repairs and recycling

Controlling roaming voice and data costs

Managing telecoms budgets with increasing demand

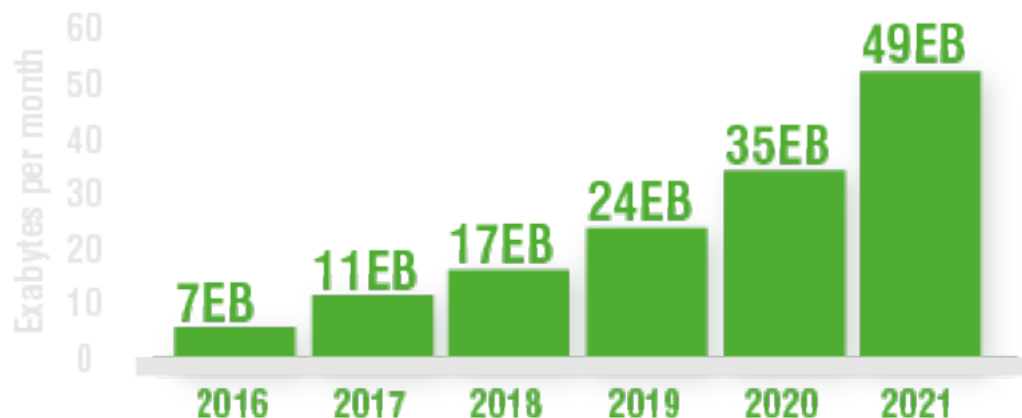

Implementing effective mobile usage and security policies

And with the rapid growth of mobile IT, data consumption, BYOD, international working, and the Internet of Things (IoT), the challenge is set to grow significantly over the coming years.

GLOBAL MOBILE DATA TRAFFIC GROWTH / TOP-LINE

Global mobile data traffic will increase 7-fold from 2016-2021

Looking for an independent guide to help you navigate the challenges of managing a large, complex mobile estate?

Utelize can help.

Utelize[®]

Our independent **Enterprise Managed Mobility Services** team specialise in helping organisations with large mobile estates to implement effective mobile management and purchasing strategies.

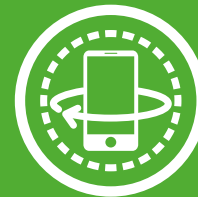

Our experienced team can provide project support to audit mobile costs and usage, and to negotiate the optimum market terms for your mobile services and devices. We also provide a range of 'in-life' services to help IT teams manage mobile devices, security, costs, and usage on an ongoing basis.

Mobile Expense Management

Mobile Device & Data Security

Mobile Device Lifecycle Management

Mobile Network & Device Procurement

Mobile Expense Management

Organisations of all sizes, from all sectors, are unknowingly overspending on mobile services. Are you?

Utelize®

Hidden costs, inappropriate tariffs and contracts, unused services, exceptional usage, policy breaches and billing errors exist in almost all mobile budgets. However, many of these opportunities to reduce and control costs can only be truly uncovered when an organisation has a detailed and continuous understanding of how it uses and manages its mobile services and devices.

An effective mobile expense management strategy can help you to optimise your mobile costs quickly, releasing significant budget that can be reinvested in transforming your Mobile IT.

Our managed mobile expense management service is tailored to your organisation's requirements and can include:

- invoice validation and budget variance tracking
- cost centre recharge and reporting
- user statements and usage policy management
- inventory management
- removal of unused services
- order tracking and order processing
- cost & tariff optimisation with savings tracking

Mobile Device Lifecycle Management

Optimising mobile device purchasing and in-life support.

Utelize®

The rapid growth of smartphone and tablet adoption within business has brought with it a whole range of new challenges for IT teams to manage. Whilst device and data security are always of paramount importance, the effective management of device sourcing, staging, repairs and ‘end of life’ processes like recycling, data cleansing, and even device resale are becoming a growing drain on IT resources.

As a result, organisations of all sizes are starting to consider the management of these devices as a ‘lifecycle’ process, in the same way that they treat other mobile user computing.

Utelize’s **Mobile Device Lifecycle Management (MDLM)** service brings together leading mobile device logistics, finance, security and support to deliver a one-stop solution to these ‘in-life’ device management challenges.

Delivered as either an independent support service, or as a simple monthly device rental charge, our flexible service can help to reduce mobile device and support costs dramatically, whilst freeing up your IT team for more strategic work.

Mobile Device & Data Security

Enabling Mobile IT without compromising your device & data security, and end-user experience.

Utelize®

With mobile users increasingly either demanding the ability to use their own mobile devices for work-related resources, or business users looking to access personal applications and content from their corporate owned devices, IT has never had more challenges to address when it comes to end-user technology decisions and data security.

Utelize's **Enterprise Mobility Management (EMM)** services bring together tailored support, and market-leading technologies, to help you address the challenges of BYOD support, data security, and application management. We'll help you to establish and manage effective Mobile Device Management (MDM) and Mobile Threat Prevention (MTP) policies, enabling you securely to separate business and personal applications and data - without compromising the end-user experience.

We can also provide **real-time** solutions that help to identify and protect against mobile viruses, 'man-in-the-middle attacks', and data leakage, whilst also controlling UK and roaming data usage, and preventing access to inappropriate content and applications.
